Amendments to the Claims

1. (Currently Amended) A method of reprinting a ~~at least one~~ page of a printed document, the method comprising:

receiving a print job at ~~printing a print job on~~ a printer to generate the printed document, wherein each page of the printed document corresponds with a logical page in the print job;

determining that a ~~at least one~~ page of the printed document includes an error ~~on the page~~;

modifying the print job to include a new logical page;

instructing a user to load the printed document into an inserter tray on the printer;

processing each page of the printed document from the inserter tray on the printer to an output tray on the printer by:

determining if a current ~~the~~ page being processed includes the error; and

if the current page includes the error, then discarding the current page, ~~reprinting~~ printing the new logical page from the modified print job to generate a new page, and sending the new page to the output tray in place of the current page including the error.~~; and~~

~~if the page does not include the error, then sending the page to the output tray.~~

2. (Currently Amended) The method of claim 1 wherein determining if the current page being processed ~~that the at least one page of the printed document~~ includes the error further comprises:

identifying a logical page in the received print job corresponding with the current page being processed;

identifying a logical page in the modified print job corresponding with the identified logical page in the received print job;

determining if there is a difference between the identified logical pages; and

indicating that the current page includes the error in response to determining that there is a difference.

~~querying the user as to whether an updated copy of the printed document is available.~~

3. (Currently Amended) The method of claim [[2]] 1 further comprising:

~~if the updated copy of the printed document is available, then~~ <u>querying the user for the</u> <u>modified print job in response to determining that a page of the printed document includes an</u> <u>error.</u> ~~automatically identifying the at least one page having the error;~~

~~if the updated copy of the document is not available, then allowing the user to identify the~~ ~~at least one page having the error.~~

4. (Currently Amended) The method of claim [[3]] 1 further comprising:

determining <u>that the error is a paper jam</u> ~~whether the error exists~~; and

notifying the user of the <u>paper jam</u> ~~error~~.

5. (Previously Presented) The method of claim 1 wherein the error includes an update to the print job after printing the print job.

6-7. (Cancelled).

8. (Currently Amended) A system <u>operable to reprint</u> <s>for reprinting</s> <u>a</u> <s>at least one</s> page of a printed document, the system comprising:

a printer <u>operable</u> <s>configured</s> to <u>receive</u> <s>print</s> a print job<u>, and</u> to generate the printed document <u>based on the print job, wherein each page of the printed document corresponds with a logical page in the print job</u> <s>and to determine that at least one page of the printed document includes an error on the page</s>; <u>and</u>

a user interface <u>operable</u> <s>configured</s> to instruct a user to load the printed document into an inserter tray on the printer[[;]]<u>,</u>

<u>wherein</u> the printer <u>is</u> further <u>operable</u> <s>configured</s> to <u>determine that a page of the printed document includes an error, to modify the print job to include a new logical page, to</u> process each page of the printed document from the inserter tray on the printer to an output tray on the printer<u>,</u> and to determine if <u>a current page being processed</u> <s>the page</s> includes the error[[;]]<u>,</u>

<u>wherein</u> the printer, responsive to <u>determining that</u> the <u>current</u> page <u>includes</u> <s>including</s> the error, <u>is</u> further <u>operable</u> <s>configured</s> to discard the <u>current</u> page, <s>reprint</s> <u>print</u> the <u>new logical</u> page from the <u>modified</u> print job to generate a new page, and <u>to</u> send the new page to the output tray <u>in place of the current page including the error.</u>[[;]] <s>and</s>

<s>the printer, responsive to the page not including the error, further configured to send the page to the output tray.</s>

9. (Currently Amended) The system of claim 8 wherein the <u>printer is further configured to: identify a logical page in the received print job corresponding with the current page being processed, to identify a logical page in the modified print job corresponding with the identified logical page in the received print job, to determine if there is a difference between the identified logical pages, and to indicate that the current page includes the error in response to the determination that there is a difference.</u>
<s>user interface is further configured to query the user as to whether an updated copy of the printed document is available.</s>

10. (Currently Amended) The system of claim [[9]] 8 wherein the printer is further operable configured to query the user for the modified print job in response to the determination that a page of the printed document includes an error.

~~identify the at least one page having the error if the updated copy of the printed document is available and to allow the user to identify the at least one page having the error if the updated copy of the printed document is not available.~~

11. (Currently Amended) The system of claim [[10]] 8 wherein the printer is further operable configured to determine that the error is a paper jam, ~~whether the error exists~~ and to notify the user of the paper jam ~~error~~.

12. (Cancelled).

13. (Currently Amended) The system of claim 8 wherein the error includes an update to the print job after printing the print job.

14. (Cancelled).

15. (New) A computer readable medium tangibly embodying programmed instructions which, when executed by a computer system, are operable for performing a method of reprinting a page of a printed document, the method comprising:

receiving a print job at a printer to generate the printed document, wherein each page of the printed document corresponds with a logical page in the print job;

determining that a page of the print job includes an error;

modifying the print job to include a new logical page;

instructing a user to load the printed document into an inserter tray on the printer;

processing each page of the printed document from the inserter tray to an output tray on the printer by:

determining if a current page being processed includes the error; and

if the current page includes the error, then discarding the current page, printing the new logical page from the modified print job to generate a new page, and sending the new page to the output tray in place of the current page including the error.

16. (New) The method of claim 15 wherein determining if the current page being processed includes the error further comprises:

identifying a logical page in the received print job corresponding with the current page being processed;

identifying a logical page in the modified print job corresponding with the identified logical page in the received print job;

determining if there is a difference between the identified logical pages; and

indicating that the current page includes the error in response to determining that there is a difference.

17. (New) The method of claim 15 further comprising:

querying the user for the modified print job in response to determining that a page of the printed document includes an error.

18. (New) The computer readable medium of claim 15 wherein the method further comprises:

determining that the error is a paper jam; and

notifying the user of the paper jam.

19. (New) The computer readable medium of claim 15 wherein the error includes an update to the print job after printing the print job.
